**Potential competing interests:** No potential competing interests to declare.

The topic is interesting and the author did a good work in this manuscript. I have some suggestions for the authors to improve this article.

1. Abstract English is weak.
2. Contribution is very less.
3. Very less citations and mostly cited references are old.
4. Introduction section missing flow, I suggested using this flow (i.e. background, related work, motivation, contribution and organization)
5. Related work is not impressive.
6. Proposed method needs some explanation regarding your work.
7. Add some pictorial presentation.
8. Results are very general (like student experiment)
9. Revise conclusion after major revision.

**Note:** This manuscript is well written but seems to be below the standard publication. I request you to please revise properly.
