Review of: "Catecholaminergic Neuron Electron Transport (CNET): A Neural Signaling Mechanism"

Behrooz Maleki[1]

1 Mazandaran University of Iran

1. The abstract is too long I suggest the authors reduce it and put the essentials in this section.

2. The novelty of this work should be highlighted.

3. The authors should prepare all tables with better quality.

4. This work should be compared with similar results in the literature.

5. The quality of some of the figures is low. Please correct.

6. All references should be checked carefully. The authors should use a uniform format for references.

7. The conclusion section also needs to be rewritten. The conclusion should contain the significant findings of the work and discuss the main points that are avenues for future work.

Language needs polishing. A lot of grammatical mistakes.
