# Postaxial acrofacial dysostosis

INSERM

## Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Postaxial acrofacial dysostosis. ORPHA:246*

Postaxial acrofacial dysostosis (POADS) is a type of acrofacial dysostosis (see this term) characterised by mandibular and malar hypoplasia, small and cup-shaped ears, lower lid ectropion, and symmetrical postaxial limb deficiencies with absence of the fifth digital ray and ulnar hypoplasia.
