Potential competing interests: No potential competing interests to declare.

There are high levels of clarity throughout the lecture of the manuscript. Also, it was a pleasure to read because of its clarity and objectivity. Nevertheless, it is necessary that the formulas on pages 8/30 and 9/30 be written correctly with an equation editor. Likewise, Figure 3 lacks clarity in the texts on the right side and, in general, could improve in its quality.

The study is important from the point of view that there are no reports on this theme, and the results are of great interest.
