Potential competing interests: No

1. While this article acknowledges the potential negative impact of chatbots on education, it does not explore in depth all possible ways in which chatbots can negatively impact the learning process and student development. A more in-depth examination of these potential negative effects could provide a more balanced perspective.
2. The authors could delve deeper into the ethical implications of relying on chatbots for learning and assessments, including issues related to authenticity, fairness, and integrity.
