

# Review of: "Performance Evaluation and Analysis of Electric Vehicle Parameters – A Test Bench"

Nurettin Çetinkaya

Potential competing interests: No potential competing interests to declare.

The necessary test equipment to evaluate the electrical parameters or other parameters of the electric vehicle is not provided. In addition, although the evaluation was made by simulation and calculation, the weight of the electric vehicle was taken as 111 kg. A new simulation study should be carried out by taking this weight between 1500-2000 kg.
