**Potential competing interests:** No potential competing interests to declare.

The compact structure presented in the study aims to address and mitigate these threats and vulnerabilities. However, the conclusion points out that the focus of future research will be to provide a more detailed architecture of the suggested model. This expanded architecture will cover various important aspects, such as cloud security, scalability, performance, and other relevant issues.

In essence, the study lays the groundwork for leveraging cloud-based solutions to facilitate work-from-home scenarios, but further research and analysis are required to develop a more comprehensive and robust model that addresses potential challenges and ensures a secure and efficient cloud computing environment for educational institutions.
