

# Review of: "ABC Group's Business Continuity Based on Uncertainty Analysis"

Olivia Prado Schiavon

**Potential competing interests:** No potential competing interests to declare.

The main idea as well as the research problem is very interesting and can become an important scientific contribution.

But, in order to bring greater robustness to the article, it is necessary to explain and deepen the research method used. Always remember to write a text that does not only reach the academic or research line audience.

In addition, it is important to support it through justifications supported by recent scientific articles and data or public information that bring about the social and organizational problems behind the research.

In conclusion, elaborate more on the background and scientific revenue from uncertainty analysis. Including the first topic, where epistemology and knowledge are behind this research that supports the issues and the findings behind the problems and solutions from the case analysis. For example: Performance Epistemology and Contingency Theory.
