Dear Editor,

Thanks for the opportunity in participating to this review.

I will like the authors to note the following:

1. The title can be rephrased using this suggestion: Antimicrobial Sensitivity Pattern of Some Medicinal Plants Extracts on Selected Clinical Isolates
2. Introduction: The figure is not numbered
3. Methodology: Authors need to rework on the methodology for clarity. 2.2. Note: rephrase 50mg/ml of each species should be 50mg/ml of each plant extract etc.
4. 2.4 - The seed extracts were not captured in the methods
5. Results: Simple graphical illustration should be used and clear explanation on the results
6. The plates and figures should be numbered
7. The research is good and it is only an addition to local knowledge on the efficacy of the plants.
