

Review of: "The Universal Accessibility Provisions in Hospitals of New Delhi, India"

Charu Maurya

Potential competing interests: No potential competing interests to declare.

The study highlights one of the major issues i.e. accessibility to the barrier-free environment for differently-abled and analyzed Indian Government hospitals for universal accessibility. The paper is well written however I would like to suggest a few changes to make it more impactful.

1. Standards and Action plans for a barrier-free environment (Table 7) for which all the hospitals were analyzed can be briefly included in the methodology.
2. The study is based on RTI reply but can be more effective if claimed response of hospitals will be cross-checked by observation.
3. Need for the study- The purpose, Methodology mentioned here can be separated under different headings.
4. Flow in writing can be improved. for ex. Legal Acts and Laws under Introduction and Literature Review can be merged for better understanding and flow.
5. A few grammatical mistakes were there. please check and correct it.

Best wishes
