

Review of: "Picture collage: A pedagogical reflective practice tool for nursing students in mental health practice"

Vincenza Ferrara

Potential competing interests: No potential competing interests to declare.

This manuscript is very interesting to suggest the practical use of visual thinking for creative strategies in health sector to improve soft skills and to create comfort zone to reflect about personal experience and wellbeing for care professionals. I suggest the authors to read other papers related to the use of visual art for nursing to improve their skills and limiting their stress to apply assessment of this approach with quantitative methods.

I suggest the authors to revise the references in the paper because some of them are not present in the bibliography at the end of the manuscript.
