Dear authors,

The manuscript titled "Collective Córregos Da Tiririca - Restoration of Riparian Forest in a Stream Contributing to Itaipu Lagoon – Niterói- RJ" presents valuable insights into the restoration of riparian forests within urban environments. The results showcased are promising and serve as a potential model for similar areas. However, the manuscript lacks information regarding the continuation of the project's planning, which could enhance its comprehensiveness.

Therefore, the article represents a meaningful contribution to the field of agroforestry restoration and holds the potential for publication.
