Potential competing interests: No potential competing interests to declare.

Overall, it is a wonderful work that deserves acceptance to be published.

Having said this, as a reviewer, I do have some questions for the authors

1. Why did the authors choose ethanol as a solvent?
2. Why did the authors concentrate on flavonoids?
3. The discussion is a little shallow; it would be better to discuss in detail. You can compare your results with other similar studies
4. Why did the authors not test in vitro antidiabetic activity? So that the paper could be more informative and valuable for the scientific community
