Potential competing interests: No potential competing interests to declare.

- 1- The most important results of the research should be clearly stated in the abstract.
- 2- Expression of innovation in the last paragraph of the introduction
- 3- Accurate and complete statement of the governing equation in section 2.1
- 4- The precise expression of hydraulic and thermal boundary conditions in a table
- 5- Validation of the results by comparison with an experimental reference should be done.
- 6- A specific format and clear demonstration are required for contours.
- 7- Adding a graph line to figures 6 and 7 that expresses the state without blades.
- 8- In the conclusion section, the detailed specifications of the research, its goals, innovation, and the range of the input parameters should be specified.
