**Potential competing interests:** No potential competing interests to declare.

Overall I think the paper is clear and concise. The abstract is straight to the point. Also, the introduction and conclusion sections are well written.

My only critique would be in the Data analysis and discussion section. I think that these should be separated, i.e Data analysis should be a separate section from discussion. This will make the flow of the article more coherent.

Also, if possible, additional citations are needed, for example: what is the toxic substance emitted from end of life mobile phones? What exactly is the Likert scale?
