

Review of: "Enhancing Cocoa Crop Resilience in Ghana: The Application of Convolutional Neural Networks for Early Detection of Disease and Pest Infestations"

Sathian Dananjayan

Potential competing interests: No potential competing interests to declare.

The article is grammatically well-written. However, this article requires clarity on the work done, and the following must be addressed.

No sufficient information on the CNN model or the comparison of various CNN models is mentioned in this article. It's better to add figures and tables wherever necessary. The information provided on the data collection process and dataset creation is generic. Results and discussion are lacking details.
