The authors report a case of 17 yo person with painful neuropathy during treatment with Bedaquiline, Linezolid and Cycloserine for MDR-PTB. The case was successfully managed by drug escalation, antineuropathic treatment and physiotherapy.

The case management is of interest.

However, there are between 50 and 150 publications on neuropathy during treatment of MDR-PTB with different drugs.

Perhaps the authors may wish to mention the full clinical spectrum of neurotoxic reaction to MDR-PTB treatment (Court et al., 2021; Saroha et al., 2020; Maqsood et al., 2022; Kuhrau et al., 2023) which may benefit from their approach.
