Review of: "A Review of Transformation and Digital Literacy for the Sustainable Development in the Greater Mekong Subregion – Working Paper"

Willie Tan[1]

1 National University of Singapore

This paper is about transformation of industry from primary to secondary and more sustainable industries, and the need for users to be digitally ready to reap the full benefits of digitalization. This is an old problem of how the developing countries can upgrade their technologies given the current skill levels. The paper does not address this issue and should change the title or address it head-on theoretically and empirically. There are many obstacles in acquiring digital skills.
