Potential competing interests: No potential competing interests to declare.

1. I think it would be better to rewrite this manuscript for the authors. For example, in the introduction, "Several unique biological properties of benzothiazole [41][42][43][44][45]" is not a full sentence.
2. Also, in the introduction, what does the sentence "For this reason, he is not recognized in the department." mean?
3. The authors should describe the process by which they did the molecular docking in more detail. For example, whether the polar hydrogen atoms were added and which kind of charge was added to the target.
4. The A in the ADMET method stands for absorption, not adsorption.
5. Not the Swissdock webserver, but the SwissADME webserver can be used to predict the ADME properties of compounds.
