Thank you for the opportunity to review this valuable article that effectively links energy availability to service delivery, particularly within health facilities. The case studies from Ghana, Tanzania, and Rwanda offer rich insights into how different contexts approach energy challenges and their implications for service delivery. The synthesis of common observations across these case studies is particularly commendable, as it highlights broader trends and lessons that can inform future policies and practices.

In terms of improvements, I recommend that the authors focus on enhancing the overall clarity and coherence of the narrative. Strengthening the connections between energy conditions and health service outcomes in each case study could provide a more consistent thread throughout the article.

Additionally, a careful review of the wording and phrasing throughout the text would help to avoid any potential ambiguities. Clear, precise language will strengthen the article's arguments and make it more accessible to a wider audience.

Lastly, the conclusion could benefit from a clearer distinction between the findings of the study and the policy implications, potentially allowing for a more impactful summary of the recommendations.

Overall, this article presents an important perspective on the intersection of energy and health service delivery, and I believe that with these adjustments, it can make an even stronger contribution to the field.
