Potential competing interests: No potential competing interests to declare.

The title of the Article is attractive and represent an emerging topic in the present time. Although, authors tried to bring the utility of tele-Education and extensively performed the literature review, the outcome and conclusion remains blurred in lack of proper scientific experimentation and case-control analysis. It is suggested that authors may bring a few more modes of tele-Education, including VR, AR etc. and perform a comparative assessment with much elaborate attributes.
