Potential competing interests: No potential competing interests to declare.

The topic selected indeed is very relevant and very interesting and will capture interest of the readers. the authors have tried to bring in the topic using simple language . However, if this has to be published as a scientific editorial or article they need to inject in more examples or numbers or figures proving the fact that COVID vaccination campaign has led to Vaccine hesitancy against routine immunization. May be show how the coverages went down and still not picking up even after the pandemic ended. quote some vaccine hesitant parents who would not vaccinate their children post pandemic. May discuss the increase in the vaccine preventable disease, Basically, we have to show proof to put across our point as this statement is already there , everybody acknowledges it. so make it more scientifically sound.
