Potential competing interests: No potential competing interests to declare.

The manuscript deals with an interesting topic, and the methodology is clear. However, the language needs to be significantly improved, and grammar has to be carefully checked throughout the whole manuscript. Moreover, the abstract and the introduction lack a research question, and some important information is missing in the experimental design.

Title

Species names have to be in italics, and "punctatus" does not require a capital letter.

Introduction

- "Aquatic body acts" instead of "act";
- "continuously increases" instead of "increase"

Materials and Methods

No information on the sample size or the time of exposure to Cd is provided.

Results

- Figure 3 is missing.
- Units of measurement have to be checked and have to be consistent between figures and tables (e.g., μmol is the correct word).

Discussion

The discussion needs to be improved, and more recent references should be used.
