KAT6A/CREBBP Fusion Protein

National Cancer Institute

Source

National Cancer Institute. *KAT6A/CREBBP Fusion Protein*. NCI Thesaurus. Code C99498.

A fusion protein encoded by the KAT6A/CREBBP fusion gene. This protein is comprised of the N-terminal zinc finger and histone acetylase domains of the histone acetyltransferase KAT6A protein fused to almost the entire CREB-binding protein, including the CREB binding, histone acetyl transferase and bromo domains.
