Thank you for this novel study that could be considered as a new avenue for long-COVID patients. Some points come to my mind about this manuscript:

1. Case 1 had fibromyalgia as an underlying disease due to its symptoms overlapping with long-COVID, so it is not obvious that the role of PAMP in alleviating symptoms is due to its effects on fibromyalgia or long-COVID.
2. In cases 2 & 3, no detail is mentioned about their medical and drug history.
3. The evaluation of symptoms was retrospective, which would contribute to recall bias.
