Potential competing interests: No potential competing interests to declare.

This article follows a structured approach, methodically presenting the findings using tables and graphs to effectively illustrate the data.

The study identifies factors related to vaccination status. However, it could delve deeper by elaborating on specific recommendations based on these results. Providing practical improvement suggestions would enhance the practical application of the study's findings.

The discussion section could benefit from a thorough analysis and comparison with similar studies, potentially establishing parallels or disparities regarding vaccination status among different regions in Ethiopia or other countries.

Additionally, the article briefly mentions ethical approval, consent, and confidentiality. Developing the ethical aspects, particularly concerning confidentiality and consent procedures, would strengthen the ethical framework of the study.
