Acquired monoclonal Ig light chain-associated Fanconi syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Acquired monoclonal Ig light chain-associated Fanconi syndrome. ORPHA:91136*

Fanconi syndrome (FS) is a generalized disorder of renal proximal tubule function. In adults over 50 years of age, FS is frequently related to the urinary secretion of a monoclonal immunoglobulin (Ig) light chain (LC), almost always of the kappa isotype.
