**Potential competing interests:** No potential competing interests to declare.

The abstract of the paper provides valuable insights into the integration of safe city concepts into Indian smart city planning, there are some potential points that could be addressed:

2. Absence of specific examples The abstract mentions international case studies and references to exemplars recognized by the Economic Intelligence Unit, but it does not provide specific examples or findings from these studies. Including concrete instances of successful safety implementations would enhance the abstract's credibility and practical relevance.
2. Limited explanation of methodology: The abstract does not elaborate on the research methodology used to analyze the integration of safe city concepts. Readers may be left wondering about the depth of analysis, data sources, and research methods employed in the study.

There are several paragraphs in the introduction and other sections without any citations, so the authors should consider this point.

The paper introduction is very poor and should be enhanced by adding previous studies.

The conclusion of the paper should be enhanced and corrected to cover the paper contents.
