

Review of: "Building Foods Data Automation Platform Using Cloud Computing Type PaaS"

Farrukh Hassan

Potential competing interests: No potential competing interests to declare.

I suggest that paper needs major revision before acceptance.

1. The objective and methodology of the paper need to be revised.

2. Clarify the Objective: The abstract mentions the collection and synchronization of data from various websites in the Medan

City government. It would be beneficial for readers if the authors explicitly state the specific types of basic foods or categories covered by the platform. This will help in understanding the scope and potential applications of the system.

3. The author should provide details on how each of these cloud service models is utilized within the context of the Foods Data Automation Platform. A brief explanation or example for each service type could enhance the reader's comprehension.

4. The author should explain or reference to the specific methods employed would add clarity, helping readers understand the technical aspects of data gathering.

5. Elaborate on how Firebase is integrated into the platform, including any challenges or advantages it brings to the data synchronization process.

6. The configuration runtime of 80%-95% need to be explained to provide additional details on what these configuration parameters represent and how they impact the functionality or efficiency of the platform.
