Prostate Cancer Prevention Trial

National Cancer Institute

Source

National Cancer Institute. *Prostate Cancer Prevention Trial*. NCI Thesaurus. Code C16070.

A phase III, randomized, placebo-controlled cancer prevention trial of >18,000 men coordinated by the Southwest Oncology Group. The trial will determine the effect of a daily dose of finasteride taken for seven years on the biopsy-proven prevalence of prostate cancer. It is scheduled to be completed in 2004.
