

# Review of: "A Villain in Disguise in the Management of Painful Peripheral Neuropathy: A Case Report"

Marc Rendell

Potential competing interests: No potential competing interests to declare.

The medical literature is dominated by the Western countries. So, an article like this highlighting drug resistant tuberculosis is most welcome and enlightening. The authors describe an adolescent treated for multidrug resistant tuberculosis with agents we rarely see used in the United States. So the description of peripheral neuropathy as an adverse event is quite educational. We look forward to more contributions from other countries and cultures on Qeios.
