Based on the comments of other reviewers, I would like to add two points:

1. The author only uses "CSR" as the keyword for the search. However, in recent years, the concept of ESG has become quite popular, and it is very close to CSR. As shown in Figure 1, the number of literatures related to CSR has decreased significantly after 2015, mainly because many literatures began to use concepts such as ESG.
2. The author only made a simple analysis based on word frequency, and did not sort out the relevant details in the Chinese research (for example, the aspects of CSR motivation can be sorted out from which aspects), which is of little significance.
