Review of: "Digital Literacy Skills of Teachers: A Study on ICT Use and Purposes"

Ling Ling Ung[1]

1 Universiti Teknologi Mara

This is an excellently written article, which showcases the authors' expertise and contribution to the field. The authors demonstrate a strong grasp of the subject matter and presents valuable insights for the academic community. However, here are a few suggestions that I believe could further enhance the quality and impact of the article:

Citation Updates: In Section 1, I noticed that some of the citations are quite old, dating back to before 2016. It would be beneficial to update these citations with more recent and relevant sources to ensure the incorporation of the latest research findings in the discussion.

Survey Question Design: I am intrigued by the survey questions used in the study. Could you (the authors) please provide more information on how these questions were designed? Considering the depth of your research, it seems that there could be additional questions that would provide further insights into the topic at hand. Particularly, in Section D, it appears that only one question is used to inquire about the difficulties of teaching digital competencies to school students. Could you elaborate on the rationale behind this decision?

Discussion Section: The discussion of your research findings could be further improved by including a more comprehensive exploration of the practical implications of your results.

Please consider these suggestions as constructive feedback aimed at improving the quality and impact of your article. I believe addressing these points will enhance the overall value of your work.
