Title: Healthcare Systems Moving Toward Data Governance-Centered Model: India's G20 Presidency in the Wake of COVID

Abstract: The abstract has discussed the background of Data Governance, however, does not explain the methodology for basis of the research for this article.

Introduction: In the second paragraph of India's G20 Presidency and Health, "holistic technology" is mentioned; however, is not explained as to what is meant by this term.

The introduction has good background information on the need for Data Governance to build resilient health systems.

Review of Literature: Prioritizing Digital Health: Key Focus Areas.

The evolution of digital health, creating a safe and secure digital ecosystem.

The NDHM (National Digital Health Mission) created a national digital health ecosystem. It includes policies, procedures, and technology that ensure data is collected, stored, analyzed, and shared in a safe and secure manner (HealthIT.gov, 2021).

India's prioritization of digital health under its G20 presidency.

The first Health Working Group. emphasized the importance of data governance in healthcare, the need for global cooperation to address health challenges, and the importance of investing in healthcare systems to improve health outcomes, to make healthcare services safe and convenient with the help of empowered frontline care leveraging technologies.

Method and Design:

Was the article based on a review of literature? What was the methodology for obtaining this information.

Discussion: Public health professionals believe that India's G20 presidency for the year 2023 presents a great opportunity for the country to emerge as a healthcare leader with a pragmatic and realistic vision to encourage new investments in

medical technologies and governance.

The G20 chair is committed to establishing a health governance mechanism to deal with emerging public health issues in terms of budget allocation and the mobilization of financial resources.

Findings and Results:

Health experts have pointed out that emergency preparedness is a priority for health systems worldwide. The G20 chair is committed to establishing health governance mechanism to deal with emerging public health issues in terms of budget health governance mechanism to deal with emerging public health issues in terms of budget allocation and the mobilization of financial resources.

Discussion:

The NDHM creation of the national digital health ecosystem a digital repository for health records, however, requires the regulatory framework for using medical devices. Self-governance healthcare systems needs to be addressed.

Conclusion:

COVID-19 brought to light the important need for effective data governance to ensure patient privacy and security. The G20 group of 2023 has an opportunity to lead the way in promoting data governance-based healthcare systems.

Recommendations for the Future:

Data governance-based healthcare systems represent the future of healthcare, and with improved digital infrastructure, internet connectivity, and the adoption of data analytics and cloud technologies, Indian health governance-based businesses and services are taking significant steps towards digitalization and modernization in both public and private healthcare sectors, developing a broad public policy consensus to increase the focus on artificial intelligence, robotics, big data tools, and analytics to solidify and strengthen India's new digital health governance system.

Notes to Authors:

A very interesting article and the topic will be of interest to the healthcare industry.

The abstract has discussed the background of Data Governance, however, does not explain the methodology for basis of the research for this article.

Recommendations: In the second paragraph of the Introduction of India's G20 Presidency and Health, "holistic technology" is mentioned; however, is not explained as to what is meant by this term.

Method and Design: Was the article based on a review of literature? What was the methodology for obtaining this information.

Notes to Editor:

The topic of this article is very timely to what is currently happening with the G20 in 2023 and will be of interest to the readers.

The article is well written and there are only a couple of suggestions for the authors to consider prior to publication.

The abstract has discussed the background of Data Governance, however, does not explain the methodology for basis of the research for this article.
