Potential competing interests: No potential competing interests to declare.

The paper deals new fixed point theorems for contractive type mappings in the setting of complete cone metric spaces and provide examples to illustrate the concepts and results developed.

The paper contains new results in the field of fixed point theory but there are some language typos. In the Abstract the authors must remove "in this article from the sentence "…to illustrate the concepts and results developed in the article."

In the Definition 1, the authors must remove "always".

Some similar kind of typos must be corrected carefully throughout the manuscript.

Overall presentation of the results if fine. It can be a good contribution to the fixed point theory.

It can be published with the corrections mentioned above.

sincerely,,
