Modifications and suggestions of the research "Substance use disorder and associated factors at an opioid de-addiction clinic in Western Kenya" is as follows.

1. Title and abstract of the study should include the study's design.
2. If this is a descriptive cross-sectional study can it infer association between factors?
3. Simply mentioning that tables were created to summarize the results of descriptive statistical measures is not enough, details of methods of measurement is required for each variable. All statistical methods needs to be mentioned.
4. How was the bias addressed?
5. How was the sample size calculated? Mention the sampling technique.
6. How was prescision estimate (eg, 95% confidence interval) made?
7. The key results should be summarized with reference to the study objectives.
8. Discuss the generalisability of the study results.

After addressing the above mentioned suggestions, if the journal policy finds the article suitable for publication, it a great read. All the best to the authors, and congratulations for the effort you all have put into it.

Regards
