# Verumontanum Mucosal Gland Hyperplasia

National Cancer Institute

## Source

National Cancer Institute. *Verumontanum Mucosal Gland Hyperplasia*. NCI Thesaurus. Code C63796.

A benign microacinar proliferation occurring exclusively in the verumontanum and adjacent posterior urethra where the ejaculatory ducts and utricule empty into the urethra. Crystalloids and intraluminal mucin are usually absent, but; intraluminal corpora amylacea are often present. The lining epithelium typically consists of bland cuboidal to columnar luminal cells with underlying basal cells.
