The manuscript is very interesting with sound scientific methods. The language is good, though with a few typographic errors. It is good for publication after a few corrections have been incorporated.

## Introduction

- The problem statement needs to be clear, and previous studies in the area on the subject should be included.
- The numbering of the tables should commence with that in the Introduction.

## Materials and Methods

- Provide relevant citations for the location of the study area, if possible a map.
- Data on temperature and rainfall of the area should be given a citation as well.
- The specifications of the electrical conductivity meter should be included (i.e., the manufacturer and the model).

## Results and Discussion

- The findings of the study should be backed by appropriate journal articles.

## References

- References are too old. Include recent literature between 2020 and 2023.
