This article will be a good addition to the body of knowledge but needs improvement.

1. The title needs to specify the study design.
2. The study speaks much about sexual and gender-based violence which is not reflected in the title.
3. The abstract can be arranged as introduction which states the problem and justification, objective, methods, results and recommendation.
4. The objective of this study needs to be clearly stated.
5. The methodology should clearly state the specific parts of the world the studies were conducted. This section needs to be improved to clearly state the study design and how the data was generated. What is shown here are the tables with results from the review.
6. Much of the study focuses on toilet facilities and insufficient information or literature on water facilities.
7. If the study was a review of other studies, then explaining the caste system and it being a major factor to verbal discrimination need to be reviewed and given as just an example.
8. The flow of this study needs improvement.
9. Find an English-speaking person to strengthen the paper.
10. The referencing should be improved.
11. Well-done on this work and i am looking forward to the final manuscript.
