The topic of this article is interesting and it is a timely topic. Congratulations.

The literature review is the strength of this article. The author demonstrated knowledge of the literature and the topic in literature. The author in the literature review showed different points of view of the analyzed topic. The article is written well, in a way that is legible and understandable to the reader. The content layout is well thought out.

A conceptualisation of the complex adaptive systems approach and the concept model is described in detail. The author analyzed processes at three levels: micro-level, meso-level, and macro-level. For each of them, propositions are defined, which is an added value from a scientific point of view.

I have a question about the sentence which you wrote in the 4.4 chapter: "There is the need to adopt an integrative systems approach to studying sustainable development (Midmore & Whittaker, 2000)." - I am wondering - is there still a need? No one has done this for over 20 years? Nothing? Be careful with sentences like that from articles from so many years ago. In industry, changes happen quickly.
