Thank you for allowing me to review this paper. The manuscript is well-written, and the topic is intriguing. The study's objectives are quite obvious, but each section's subheadings need to be numbered. The writers ought to provide a succinct explanation of why the mental health of mobile populations is a significant health concern in Nepal, given that readers from other countries may not be familiar with the country's background.

The variable categorization, which relates to whether the internal migrants are foreign or local citizens, is the other problem. I'm hoping for a re-review opportunity when the authors make revisions to the work. Thank you.
