Some general comments about the Preprint MANUSCRIPT

First of all, in opinion of this reviewer the manuscript is longer, as a consequence, must be organized very well in order to understand the content.

In spite of author is clear to mentioned, "A comprehensive analysis", In many sections of the work the sources are not specified, for instance in all figures and tables, so, the suggestion is, based in what the author have been obtained the information, if was previously organized, or some treatment was done or citation data. I think it is the more weak of the work.

Analysis of information is current, talking about water irrigation, saving water, crop production, climate change etc. it are currently topics. However, even though author refer information of turkey, many of the analysis can be used in anywhere country. The suggestion is organize the manuscript in order to enhance the TURKEY conditions, such as the crop productions. Above all, you can organize the presentation by objectives.

Author mentions the use of economic models, politics and references, but the information is dispersed, in opinion of this reviewer.

The information is interesting, the analysis is good, just be specific, what is your comparison vs modeling, politics and bibliographic, as was remarked in the file.

The work is interesting for the publication
