Proteinase Inhibitor Gene

National Cancer Institute

Source

National Cancer Institute. *Proteinase Inhibitor Gene*. NCI Thesaurus. Code C29936.

Proteinase Inhibitor Genes encode Proteinase Inhibitor Proteins that block the activity of proteases, endopeptidases that catalyze the cleavage of internal peptide bonds in a polypeptide or protein substrate (Serine Endopeptidases, Cysteine Endopeptidases, Aspartic Endopeptidases, Metalloendopeptidases, and other Endopeptidases). (NCI)
