Feedback on Manuscript: "Mycetoma in Animals: A Review of Cases Reported From 1925-2022; Epidemiology and Management Strategies" (Qeios ID: ZLD37V)

I'm providing my feedback as a reviewer regarding the overall structure and organization of the manuscript.

The order and development of the sections is reassuring, as you have strived to ensure clarity and coherence throughout the document.

Regarding Table 1, I noticed that several scientific names related to etiology are written without spaces between the binomial names. For example, "*Drechsleraspiciferum*" should be written as "*Drechslera spiciferum*". There are approximately 15 scientific names written this way. I kindly suggest revising the table accordingly to enhance its readability and effectiveness in conveying the relevant information.

Many regards
