Potential competing interests: No potential competing interests to declare.

The discussion section needs to be expanded to provide a more in-depth analysis of the heavy metal limit values.

The authors should consider discussing the implications of their results in relation to existing literature, highlighting similarities and differences for human health risk assessment.

Furthermore, addressing potential limitations and suggesting areas for future research would enhance the overall quality of the discussion.

The conclusion is currently relatively brief and could benefit from a more comprehensive summary of the key findings.

Also, authors should explicitly tie the results back to the research objectives, emphasizing the practical and theoretical implications of the study.
