# Treatment Contrast Interaction

National Cancer Institute

## Source

National Cancer Institute. *Treatment Contrast Interaction*. NCI Thesaurus. Code C142732.

The situation in which a treatment contrast (e.g., difference between investigational product and control) is dependent on another factor (e.g., center). A quantitative interaction refers to the case where the magnitude of the contrast differs at the different levels of the factor, whereas for a qualitative interaction, the direction of the contrast differs for at least one level of the factor.
