Review of: "Visualizing the Mind: A Deep Dive into Computer Vision and Psychological Phenomena"

Xiaoyuan Wang[1]

1 Qingdao University of Science and Technology

A study of the relationship between computer vision and psychological phenomena is mentioned in this manuscript. However, there are some deficiencies in the manuscript. Some of the detailed comments are as follows:

1. Only some basic concepts of computer vision and psychology are explained in the manuscript. There is no experimental study or analysis of the relationship between the two fields.

2. The cases mentioned in the manuscript need further explanation and analysis.

3. There is no comprehensive literature review on the relationship between computer vision and psychological phenomena in the manuscript.
