The article worthy to accept after the addressing the reviewers good suggestions.

I have few questions to the authors and publication team of this journals.

- 1) Either the reviewers comments are being addressed by authors or not?
- 2) Is it really required to review the article by more than 15-20 reviewers to accept the article ? and, whose comments needed to be considered. My suggestion is, pick maximum 6 dedicated reviewers.

So, I am neutral to review and comment on this article. Only one comment on the literature survey is, the authors have not cited the recent relevant publications. If they want to address my comment, I'll provide the recent publications on the same topic.
