

# Review of: "Digital Mapping of Resilience and Academic Skills in the Perspective of Society 5.0 for Higher Education Level Students"

Yunika Triana

Potential competing interests: No potential competing interests to declare.

Title: must be reformulated based on the objective of the research

Abstract: The objective is not presented

Introduction: the gaps of digital and academic resilience are presented, but not the academic skill.

Method: there is no selection on inclusion or exclusion criteria of the sample. I think that some of indicator can not reflect digital resiliency. The indicator should be closely related to the digital setting. Be careful with the negative scale of the last variable (Negative affect and emotional response). The higher the value, the worse it is, in contrast to the other variables.

Result: The word "variable" is not used consistently.

Discussion: good enough.

Conclusion: There is no suggestion for further research. There must be implications for university stakeholders or readers. This research was conducted last year during a pandemic, so it should be evaluative in nature which has a positive impact on the current situation (endemic period).
