Dear Authors : The aim of using technology is to make people with disabilities an autonomous people.

"Human-Computer Interaction (HCI) Interventions for People with Disabilities" this is a well choice of topic.

In **Introduction** section :

- has a large part describes computer parts H/W and S/W rather than focus on how people with disabilities could interact with it.

- The research expanded to older people. Should be added to the title or narrow it down to people with disabilities only, as they have different requirement and conditions than older people.

objectives and the methodology are well presented.
